PARTITIONS

operable walls

The combination of function & form

operable walls

tenon

The **Tenon Operable Wall** range offers an unrivalled choice of quality engineered moveable partitions that provide effective space management. Designed to suit all applications and budgets, the range is suitable for use in areas where flexibility is equally as important as performance, for instance: -

- » Office interiors and meeting rooms
- » Conference and function suites
- » Sports and leisure facilities
- » Education establishments
- » Exhibition centres

Silenta

Silenta is a high specification; top hung acoustic moveable wall system that provides acoustic performance of between 37/53dB_(RW). The system comprises individual panels suspended from a top track only, with each panel having a top and bottom retractable seal that locks between the ceiling track and floor. Operation of the seals is achieved by a simple 90° turn of the removable locking handle and a variety of stacking arrangements ensures optimum use of space. Pass doors may also be included if required.

The appearance of the system may be tailored to suit individual requirements with facings available in hardwood veneer, vinyl, melamine, laminate or spray finishes. Panel edges can be fitted with either exposed or concealed profiles to suit the frequency of use, with additional special details such as routed grooves or applied mouldings also available. Some facings can be supplied to meet Class 1 or Class O fire ratings.

Compacta

Compacta is a hinged panelled sliding wall system, floor track fitted with an optional top hung system available. The range is designed for rooms where multiple uses and rapid changes are required. Panels are fitted with an aluminium profile to each long edge complete with rubber box seals to ensure an airtight fit when fully closed. A reasonable level of sound reduction is achieved with the use of bubble seals at the upper and lower edges of the panels.

The folding configuration is tailored to meet individual specifications allowing panels to stack at one end or be bi-parting and be either centre fitted or off-set. The system can incorporate routed grooves to give the appearance of dado rails or skirting and is available with a variety of finishes some providing Class 1 or Class O ratings.

For more information or advice on this system's performance please contact the Tenon Technical Department.

Observa

Observa fully glazed screens afford a fresh, modern and exciting alternative for the division of areas without the visual barrier of solid panels. Ideal for offices, schools, leisure centres and shopping complexes, glass panels are individually supported from a heavy-duty head channel or can be operated with floor support and top guide track. The system can be stacked to one side or supplied for bi-parting.

Available in either single or double glazed format, panels may be supplied to include manifestation or blinds. Swing doors or full height pass doors are available with all aluminium profiles available in either an anodised or powder coated finish. Acoustic ratings of up to 32dB_(RW) are achievable.

Consertina

The **Consertina** range has been developed to provide speedy, efficient and cost effective room division. Available in durable lightfast, flame retardant and non-corrosive PVC coated fabrics or a choice of vinyl coverings, the system is top hung without floor rails and either single or bi-parting units.

All flame retardant materials conform to BS6868 with acoustic performance ranging from 15 to 32dB_(RW) depending to the model specified.
