PARTITIONS

wall store

A modular high density office storage system

Tenon Wall Store is constructed from high density particle board faced on both sides with non-glare melamine. Doors, infill panels and backs are edged with a 3mm PVC lipping.

With floor space being an expensive commodity for any business, the application of Tenon Wall Store makes sound economic sense. As well as being highly space efficient, the system is totally demountable and can be easily relocated and reconfigured. It has long-term value which makes it an attractive financial investment.

Concept

Designed to integrate with, and to compliment, the full range of Tenon partitioning systems; Tenon Wall Store is a simple but effective concept which utilises ceiling-height, variable modular storage units. Wall lengths are assembled from a choice of elevation options to provide compact and streamlined storage. These can be used as both free-standing room dividers or as partition walls for cellular offices.

The system offers an extensive choice of door and drawer configurations as well as the potential to include open shelving and display features. Furthermore, audio-visual presentational equipment such as screens and television monitors can be easily accommodated.

Doors

Doors are fitted with high specification Espagnolette locks and hinges to ensure robust and dependable performance. Units have adjustable feet to overcome unevenness in flooring levels.

Tenon Wall Store has the backing of full site surveying and installation services if required.

Inter-connecting office doors are accommodated into the partitioning via pre-fabricated integral door modules.

Tenon Wall Store can be used to accommodate cabling and service ducts so providing an effective means of concealment. The system can also be fitted with a double back and sound-deadening insulation to enhance inter-office acoustics.

Tenon Wall Store is extremely cost-effective when compared with other storage methods.

Bespoke colourways

Tenon Wall Store can be manufactured to match furniture and interior detailing in most veneer finishes.

Standard finishes provide a choice of two frame-work finishes - Light Grey and Dark Grey, and four standard melamine door finishes - Light Grey, Dark Grey, Light Oak and Cherry.

Choice

The broad palette of finishes, along with the extensive range of elevation options, offers the designer and specifier great creative freedom. With Wall Store, there is the potential to tailor installations to suit every kind of corporate requirement ranging from the busiest work environment to the more prestigious and status conscious locations of reception and boardroom.

Office doors incorporated with the Tenon Wall Store system are fitted with a range of door furniture available ex-stock in polished brass, polished stainless steel and nylon; aluminium finishes are also available in virtually any RAL or BS colour. Skirting components can be specified to match corporate livery or to co-ordinate with furniture or building fabric finishes.

The shelving support system offers 14mm height adjustment of shelves.

Fittings

A metal ladder shelving system provides an effective method for the arrangement and adjustment of internal configurations. Lateral filing can be accommodated by using standard filing frames or metal combination shelves with integral filling rails.

1. Combination shelf with lateral filing frame.
2. Pull-out frame for lateral filing.
3. Pull-out frame for horizontal filing.
4. Slotted metal shelf.
5. Pull-out reference shelf.
6. Pull-out filing draw with horizontal filing.
7. Wardrobe conversion fittings.

Each Tenon Wall Store consists of a starter unit and an extension or a number of extension units. When used as a partition, units can be arranged to provide storage which can be accessed from each side. Back panels match the finishes and detailing of doors and frame-work components.

Wallstore is only one of the systems that forms the Tenon range. Other products in the range include:
